ive looked all over for a way to fix this but i cant seem to find a fix. anyone have any ideas?Q: IntelliJ-IDEA with TSSDK on Debian I have IntelliJ-IDEA 12.01.3 and I installed TSSDK to use the Android SDK Manager (see: IntelliJ-IDEA recognizes it and it works for the OpenJDK 7. But for TSSDK it only gives errors with OpenJDK 6. It says this: Exception in thread "main" java.lang.RuntimeException: Unable to find package "com.android.sdklib.internal" in "/usr/lib/jvm/java-6-openjdk-amd64/lib/tools.jar" And it says: E:\android-sdk-r10\tools>java -cp. -Djna.nosys=true -Djna.boot.library.path="E:\android-sdk-r10\platforms;E:\android-sdk-r10\extras;E:\android-sdk-r10\tools" com.sun.jna.Native.main(Native.java) NativeException(java.lang.reflect.InvocationTargetException, Unable to find package "com.android.sdklib.internal" in E:\android-sdk-r10\platforms\android-17\build.xml:335: Missing attribute(s) But if I change to OpenJDK 7 it doesn't recognize it. How can I make it to work with TSSDK? A: I had a similar problem with a recent version of intellij, I noticed that the tools jar wasn't updated properly. If you go to E:\android-sdk-r10\tools\lib\tools.jar and edit it, then try again, you should see a message that you need to update tools.jar. On windows I recommend using the trial version of IntelliJ to do the update. Edit Turns out IntelliJ 82157476af
